Outgassing Compliant Coupled Inductors AE590PND

- Passes NASA low outgassing specifications
- High temperature materials allow operation in ambient temperatures up to 155°C.
- Excellent coupling coefficient (k ≥ 0.98)
- Ideal for use in a variety of circuits including flyback, multi-output buck, SEPIC and Zeta.
- High inductance, high efficiency, excellent current handling and 500 V isolation in a very rugged part.
- Well suited for use as VRM inductors in high-current DC-DC and VRM/VRD controllers.
- Can also be used as two single inductors connected in series or parallel, as a common mode choke or as a 1 : 1 transformer.

Core material Ferrite

Core and winding loss Go to online calculator

Terminations Tin-lead (63/37) over tin over nickel over phos bronze

Weight: 2.8 – 3.2 g

Ambient temperature –55°C to +105°C with Irms current

Maximum part temperature +155°C (ambient + temp rise)

Storage temperature Component: –55°C to +155°C.
Tape and reel packaging: –55°C to +80°C

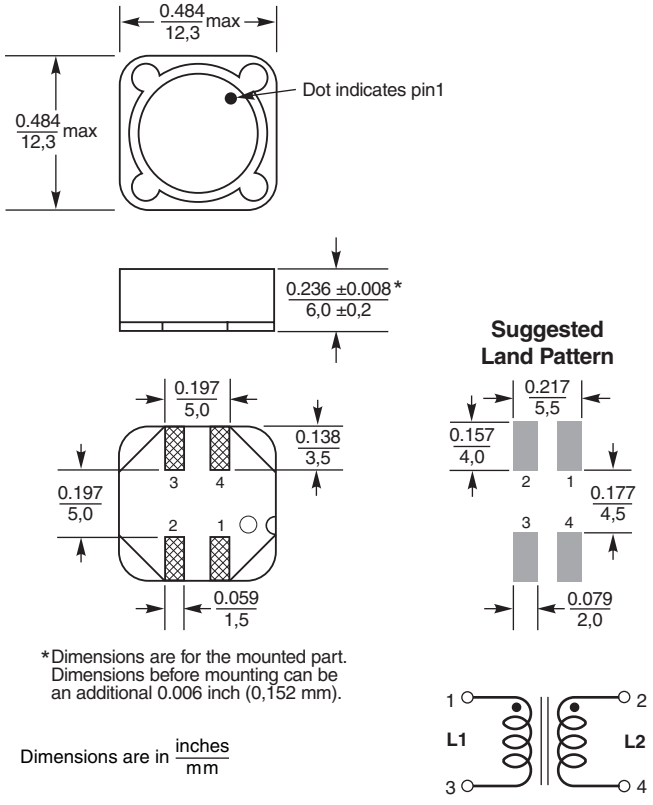
Winding to winding isolation 500 Vrms

Resistance to soldering heat Max three 40 second reflows at +260°C, parts cooled to room temperature between cycles

Moisture Sensitivity Level (MSL) 1 (unlimited floor life at <30°C / 85% relative humidity)

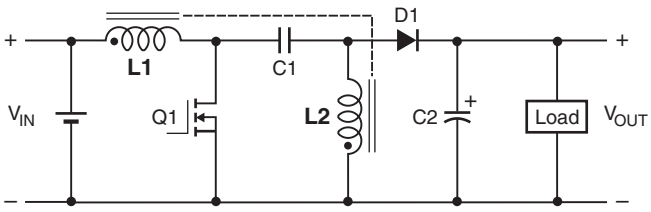
Winding-to-winding and winding-to-core isolation 500 Vrms

Enhanced crush-resistant packaging 500/13″ reel;
Plastic tape: 24 mm wide, 0.35 mm thick, 16 mm pocket spacing, 6.6 mm pocket depth



*Dimensions are for the mounted part. Dimensions before mounting can be an additional 0.006 inch (0,152 mm).

Dimensions are in inches / mm



Typical SEPIC schematic

1. When ordering, please specify s**creening** code:

   AE590PND105KSZ

   Screening: **Z** = Unscreened
   H = Coilcraft CP-SA-10001 Group A
   G = Coilcraft CP-SA-10001 Group A (SLDC Option A)
   D = Coilcraft CP-SA-10001 Group A (SLDC Option B)
   1 = EEE-INST-002 (Family 1) Level 1
   2 = EEE-INST-002 (Family 1) Level 2
   3 = EEE-INST-002 (Family 1) Level 3
   4 = MIL-STD-981 (Family 04) Class B
   5 = MIL-STD-981 (Family 04) Class S
   F = ESCC3201 (F4 operational life performed at 105°C)
   - Screening performed to the document's latest revision.
   - Lot qualification (Group B) available.
   - Testing T and U have been replaced with more detailed codes 4, 5, and 1, 2, 3, respectively. Codes T and U can still be used, if necessary. Custom testing also available.
   - Country of origin restrictions available; prefix options G or F.

2. Inductance shown for each winding, measured at 100 kHz, 0.1 Vrms, 0 Adc on an Agilent/HP 4284A LCR meter or equivalent. When leads are connected in parallel, inductance is the same value. When leads are connected in series, inductance is four times the value.
3. DCR is for each winding. When leads are connected in parallel, DCR is half the value. When leads are connected in series, DCR is twice the value.
4. SRF measured using an Agilent/HP 4191A or equivalent. When leads are connected in parallel, SRF is the same value.
5. DC current, at which the inductance drops the specified amount from its value without current. It is the sum of the current flowing in both windings.
6. Equal current when applied to each winding simultaneously that causes a 40°C temperature rise from 25°C ambient. See temperature rise calculation.
7. Maximum current when applied to one winding that causes a 40°C temperature rise from 25°C ambient. See temperature rise calculation.
8. Electrical specifications at 25°C.

Refer to Doc 639 "Selecting Coupled Inductors for SEPIC Applications."
Refer to Doc 362 "Soldering Surface Mount Components" before soldering.

Coupled Inductor Core and Winding Loss Calculator

This web-based utility allows you to enter frequency, peak-to-peak (ripple) current, and Irms current to predict temperature rise and overall losses, including core loss. Go to online calculator.
